

**Serious about ANPR. Serious about Service.**

### Your Intelligence and Communications Hub

The Vehicle Intelligence Server and Communications Engine (VISCE) serves two fundamental roles.

#### 1. Central ANPR / ALPR Communications Platform

- Management of hotlists from with national, regional, and local sources such as NCIC, PNC, and DVLA.
- Sharing of hotlists among Mobile and Fixed ANPR / ALPR systems
- Administration of system users and inter-agency data sharing

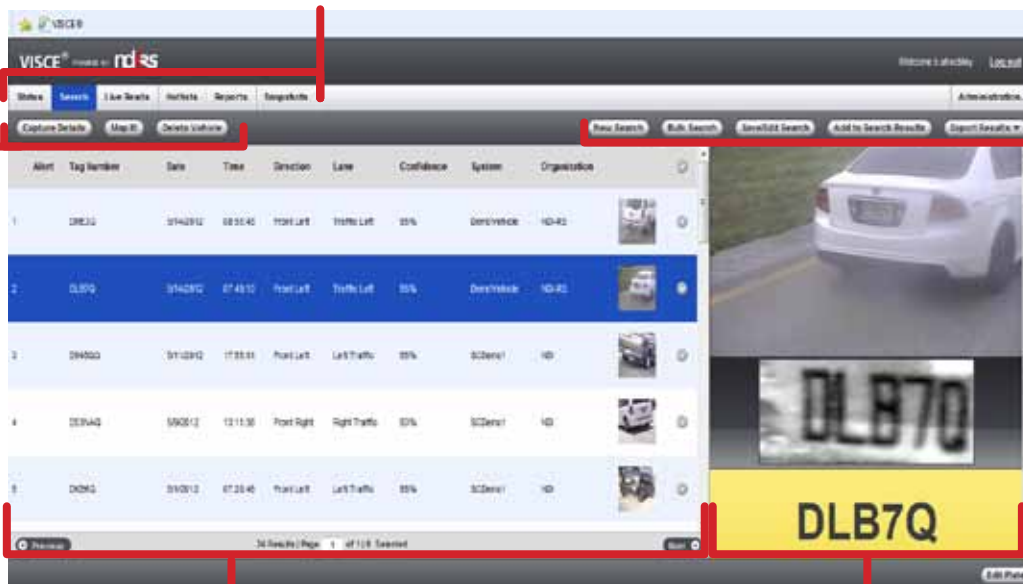

#### 2. Central Intelligence Repository for Collected ANPR / ALPR Data

- Date / Time queries
- Individual or partial plates queries
- Geographic queries
- Reporting
- Crime Incident Analysis
- Convoy Analysis
- Real-time Vehicle Loop (Cruising) Analysis
- SQL database engine and NIEM-compliant xml output

### Here's what VISCE can do:

View system stats, search for suspect vehicles, create and view reports, communicate with connected clients, view live reads from Fixed Systems, manage hotlists, and more - all from one simple interface.

View details about the selected capture, quickly edit the plate in case of a misread, view the selected capture(s) on a map, or add it to a hotlist for future alerts.

Edit the search that produced the existing results or create a new search; launch these search results in a new window to compare multiple searches, or save the search parameters to search again later.

View your search at a glance, and quickly sort based on any of the parameters including date / time, alert type, confidence of read, and more. Scroll through thumbnail images to identify those matching a witness description.

The layout lets you easily scan vertically, comparing the vehicle photo, the infrared plate photo, and the recognized plate number.

Web: www.ndi-rs.com Email: sales@ndi-rs.net

**Serious about ANPR. Serious about Service.**

View one or more vehicles on a map, analyze common plates against crime scene locations, and more.

Intelligent searches from VISCE allow querying by full or partial plate, geographic location, time / date, and more.

## UNIVERSAL COMPATIBILITY

In addition to storing, matching and reporting on millions of vehicle reads everyday, VISCE is architected for universal application.

The VISCE GATE application facilitates the sending of ANPR / ALPR data and images to other central systems such as the United Kingdom's Police Service Back Office (BOF) via accredited web services. This additional application gives commercial users the ability to easily supply data to the police services to deter crime and for criminal intelligence purposes.

VISCE can also be integrated with any mainstream ANPR / ALPR engine with results presented in a standard and user-friendly format. VISCE uses Microsoft SQL for its database engine, and can also be configured to provide data in a NIEM-compliant xml format.

Further information can be obtained from the NDI sales team.
